About me

- ▶ 楊志璿
- NSYSU Information security club founder
- Resume
- ► Linux, Modern C++

A book

Secure Programming
Not hard, no much pages.

Outline

Background

Programmer's qualities Arithmetic overflow ReDoS RAII

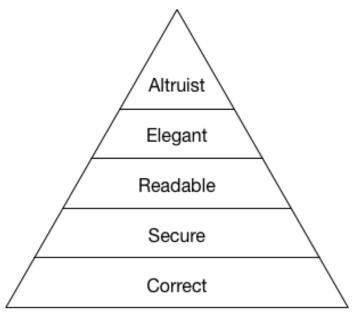

Memory safe
Buffer overflow
Memory leakage

Call out to other routines Injections

Others
Language features
Authentication

Background

Maslow's pyramid of code review

Maslow's pyramid of code review

- ► Correct:做到預期的行為了嗎?能夠處理各式邊際狀況 嗎?即便其他人修改程式碼後,主體的行為仍符合預期嗎?
- ▶ Secure: 面對各式輸入條件或攻擊,程式仍可正確運作嗎?
- ▶ Readable:程式碼易於理解和維護嗎?
- ► Elegant:程式碼夠「美」嗎?可以簡潔又清晰地解決問題嗎?
- ► Altruist:除了滿足現有的狀況,軟體在日後能夠重用嗎? 甚至能夠抽離一部分元件,給其他專案使用嗎?

Programmer's qualities

Arithmetic overflow

Data Model					
Туре	LP32	ILP32	LP64	ILP64	LLP64
char	8	8	8	8	8
short	16	16	16	16	16
int	16	32	32	64	32
long	32	32	64	64	32
long long	64	64	64	64	64
pointer	32	32	64	64	64

Bits field

2's complement

Eg:

- ► 0x1234ABCD
- ▶ 0x00BADBAD
- ► 0xFFFFFFF

Integer overflow

2002 FreeBSD

```
#define KSIZE 1024
char kbuf[KSIZE];
int copy_from_kernel(void *user_dest, int maxlen) {
   int len = KSIZE < maxlen ? KSIZE : maxlen;
   memcpy(user_dest, kbuf, len);
   return len;
}</pre>
```

What if maxlen < 0? Take maxlen as -1, try it!

Integer overflow

2002 External data representation (XDR)

```
void *copy_elements(void *ele_src[], int ele_cnt, int
     ele_size) {
    void *result = malloc(ele_cnt * ele_size);
    if (result == NULL)
      return NULL;
   void *next = result;
    for (int i = 0; i < ele_cnt; i++) {</pre>
6
      memcpy(next, ele_src[i], ele_size);
7
      next += ele_size;
8
9
    return result;
10
```

What if ele_cnt $= 10^{22}$, ele_size $= 10^{10}$? Try it!

Binary search

```
int wrong(int *arr, size_t len, int target)
  {
3
      int begin = 0, end = len;
      while (begin <= end)
4
5
           int mid = (begin + end) / 2;
6
           if (arr[mid] == target)
7
               return mid;
8
           else if (arr[mid] < target)</pre>
9
               end = mid;
10
           else
11
               begin = mid;
12
13
      return -1;
14
15 }
```

Binary search

```
int correct(int *arr, size_t len, int target)
2
  {
3
      int begin = 0, end = len;
      while (begin <= end)
4
5
           int mid = (begin >> 1) + (end >> 1);
6
           if (arr[mid] == target)
7
               return mid;
8
           else if (arr[mid] < target)</pre>
9
               end = mid;
10
           else
11
               begin = mid;
12
13
      return -1;
14
15 }
```

Binary search

- ▶ 1946 idea
- ▶ 1960 mathematical analysis
- ▶ 1988 find bugs.

Donald Knuth

Although the basic idea of binary search is comparatively straightforward, the details can be surprisingly tricky.

Appendix here - Donald Knuth

- ► T_FX
- ► The Art of Computer Programming (TAOCP)

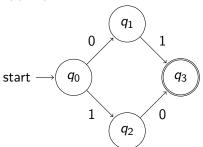

ReDoS

Regex

- ► Regular expression
- ► Finite state machine

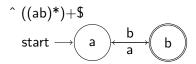

Regex basic

Regex 101

Let's try:

- ► A brown fox jumps over the lazy dog.
- Student ID.
- ▶ Binary search code.
- ► Email.

Halting problem

Input

ababababababababababa

Halting problem

- (ababababababababababab) Nope
- (abababababababababab)(ab) Nope
- (abababababababababab)(abab) Nope
- (abababababababababab)(ab)(ab) Nope
- (ababababababababab)(ababab) Nope
- (ababababababababab)(abab)(ab) Nope
- (ababababababababab)(ab)(abab) Nope
- ► (abababababababababab)(ab)(ab)(ab) Nope

Halting problem

$$dp[0] = 1$$
 $dp[N] = \sum_{i=0}^{N} dp[i] + dp[N-i]$ $\sim O(3^N)$

ReDoS

So, please check what you did. User provides regex should have a timeout threshold. Don't believe the user inputs.

- ► Resource Acquisition Is Initialization
- ► Bjarne Stroustrup
- ► Constructor, destructor
- Don't memorize.

lifetime

objects, files, sockets, locks

exceptions

Memory safe

sample code.

Try some code. strcpy, strncpy

bof on stack

canary

sample code

Try some codes. new, delete.

Garbage Collection

RAII

Call out to other routines

SQL injection

not checking, string concatenation

Command line injection

not checking, don't call commands directly.

Others

Strong types, week types

Duck typing Philosophy

Inheritance

Python

Passwords

hash
